MONROE MINERALS INC.

Notes to Consolidated Financial Statements September 30, 2006 - Unaudited

Monroe Minerals Inc. (the "Company") is incorporated under the laws of Alberta. The Company's principal business is the acquisition, exploration and development of diamond resource properties in Southern Africa.

1. Basis of presentation:

The unaudited interim consolidated financial statements of the Company have been prepared in accordance with Canadian generally accepted accounting principles ("GAAP"), and follow the same accounting principles and methods of application as those disclosed in Note 1 to the Company's audited consolidated financial statements for the year ended December 31, 2005. These financial statements do not include all disclosures required by Canadian GAAP for annual financial statements and, accordingly, should be read in conjunction with the Company's consolidated financial statements included in the 2005 Annual Report.

The preparation of financial statements in conformity with Canadian GAAP requires management to make estimates and assumptions that affect the reported amounts of assets and liabilities and disclosure of contingent assets and liabilities at the date of the financial statements and the reported amount of revenues and expenses during the period. Actual results could differ from those estimates.

The Company's ability to continue operations is dependent on the Company's success in developing commercial mineral interests and obtaining funds to continue their development and attaining profitability. These financial statements have been prepared on the basis that the Company will continue to raise sufficient financing and to realize its assets and discharge its obligations in the ordinary course of business and do not reflect adjustments that would otherwise be necessary if the going concern assumption were not valid.

2. Mineral interests:

MONROE MINERALS INC.

Notes to Consolidated Financial Statements

September 30, 2006 - Unaudited

2. Mineral interests (continued):

Mineral interests under development totalling \$800,859 (December 31, 2005 - \$503,940) are not subject to depletion and amortization. During the period, \$229,959 (2005 - \$5,365) of general and administrative expenses and \$420,595 (2005 - \$116,444) of salaries relating to exploration activities were capitalized to mineral interests.

The Company determined that based on the exploration results to date and the changed factors in South Africa, the Allandale and Middle Orange River projects were unlikely to meet the Company's original expectations. As a result, the Company recognized a write down in the amount of \$241,081.

The reclamation and closure costs relating to the London project were incurred as part of operating costs for the period. Accordingly, there are no additional provisions required and the estimated future reclamation and closure costs at September 30, 2006 are \$nil (2005 - \$nil).

In connection with the Cangandala Concession in Angola, the Company has made a deposit of US \$400,000 with Endiama, the Angolan state diamond company.

3. Long term debt and amount due to related party:

	September 30 2006	December 31 2005
Loan, denominated in sterling, bearing interest at 7% per annum, with no repayment terms and secured by a charge on the income from the London, South Africa mineral interests, due to an entity controlled by the Company's controlling shareholder.	\$ 633,036	\$ 598,268
Less current portion	(316,518)	(299,134)
	\$ 316,518	\$ 299,134

The amount due to related party of \$330,000 (December 31, 2005 - \$380,000) is in respect of unpaid salary to the President of the Company, is unsecured, has no repayment terms and bears no interest. An additional \$nil (December 31, 2005 - \$50,000) of unpaid salary is included in accounts payable and accrued liabilities.

The Company is also indebted to the President of the Company in the amount of \$9,095 (December 31, 2005 - \$34,539) in respect of expenses incurred on its behalf. These amounts, included in accounts payable and accrued liabilities, have no fixed terms of repayment, are unsecured and bear no interest.

The above transactions were in the normal course of operations and were recorded at the exchange amounts, which were the amounts agreed to by the related parties involved.

Share capital and other, December 31, 2005 \$ 7,155,908

Share capital and other, September 30, 2006 \$ 8,078,612

(a) Financing:

In November and December 2005, the Company issued 14,251,500 units at a purchase price of \$0.13 per unit for total consideration of \$1,852,695 by way of Short Form Offering Document and private placement. Each unit consists of one common share and one common share purchase warrant ("warrant"). Each warrant is exercisable for 18 months from the date of issuance into one common share at a price of \$0.20 per common share, subject to earlier expiry in certain circumstances. Agents for the financing received cash commissions totalling \$149,455, broker warrants to acquire up to 313,000 common shares at a purchase price of \$0.13 per common share on or before May 22, 2007, and agent options to acquire up to 945,150 units ("agent units") at a purchase price of \$0.13 per agent unit on or before May 17, 2007. Each agent unit consists of one common share and one common share purchase warrant ("agent warrant"). Each agent warrant is exercisable until May 17, 2007 into one common share at a price of \$0.20 per common share, subject to earlier expiry in certain circumstances.

MONROE MINERALS INC.

Notes to Consolidated Financial Statements
September 30, 2006 - Unaudited

4. Share capital and other (continued):

(a) Financing (continued):

On April 18, 2006, the Company issued 7,983,076 units at a purchase price of \$0.13 per unit for total consideration of \$1,037,800 by way of a private placement. Each unit consists of one common share and one-half of one common share purchase warrant. Each full warrant is exercisable into one common share at a price of \$0.20 per common share until October 18, 2007. The Company has the right to accelerate expiry of the warrants should the trading price of its common shares exceed \$0.20 per share over a period of 20 consecutive trading days. The common shares and warrants are subject to a four month hold period from the date of issuance. A finders fee in the amount of \$51,738 was paid to an arm's length finder in connection with the offering.

(b) Diluted loss per share:

Options and warrants outstanding during the period were not included in the computation of diluted loss per share because the exercise prices were greater than the average market price of the common shares during the period.

(c) Stock options and warrants:

On September 1, 2006, the Company granted options to purchase 4,250,000 common shares at an exercise price of \$0.15 per share, expiring August 31, 2010. The options were granted to directors, consultants, and an employee of the Company. The Company will record annual compensation expense of \$36,660 over the next four years, calculated using the Black-Scholes option pricing model assuming a risk-free interest rate of 3.2%, an expected life of 5 years, and an expected volatility of 60%.

	Number outstanding	Weighted average exercise price	Number exercisable	Weighted average exercise price	Grant date	Expiry date

	2,329,000	2,454,000
Less valuation allowance	(2,329,000)	(2,454,000)
	\$ -	\$ -

Management Discussion and Analysis

The following Management's Discussion and Analysis ("MD&A") of the results for the quarter ended September 30, 2006 (referred to as the third quarter) should be read in conjunction with Monroe Minerals Inc.'s ("Monroe" or "the Company") audited consolidated financial statements for the year ended December 31, 2005 (filed on SEDAR on April 12, 2006) and the accompanying notes, as well as the Company's unaudited consolidated financial statements and notes for the nine months ended September 30, 2006. The MD&A has been prepared as of November 23, 2006. Information provided herein relating to the balance of 2006 and later years is based on assumptions regarding future events and results may vary.

Third Quarter Highlights

Highlights during the third quarter of 2006 include:

- On September 1, 2006, the Company granted options to purchase 4,250,000 common shares at an exercise price of \$0.15 per share, expiring August 31, 2010.
- The Company received approval from Agencia Nacional de Investimento Privado (ANIP), the Angolan State inward investment authority, on September 19, 2006. This approval represents an important step forward in the registration process of the Company's activities on the Cangandala project in Angola.

Monroe's Business

Background

Monroe is engaged in the exploration and development of gem quality diamond properties in Southern Africa. Monroe is a reporting issuer in Alberta and British Columbia and its shares trade on the TSX Venture Exchange under the symbol MMX.

New Developments

On September 1, 2006, the Company granted options to purchase 4,250,000 common shares at an exercise price of \$0.15 per share, expiring August 31, 2010. The options were granted to directors, consultants, and an employee of the Company.

Implementation of the Company's exploration program for the Cangandala Concession in Angola has been severely hampered by a series of administrative difficulties in Luanda. A major step forward was made on September 19, 2006 with receipt of approval from Agencia Nacional de Investimento Privado (ANIP), the Angolan State inward investment authority. This approval facilitates subsequent Angolan Central Bank and customs clearance procedures.

Negotiations on the acquisition of mineral concessions in the Democratic Republic of Congo (DRC) were conducted with a number of parties. The first elections in 50 years were held recently in the DRC under international supervision and it is hoped that these will lead to sustained peace after a long period of strife. Portions of the DRC are well situated on the Kasai Craton and these offer both kimberlite and alluvial exploration opportunities. The DRC currently ranks sixth in terms of global diamond output (2005 production value US\$0.8 billion approximately) and it is expected that this will grow substantially if peace prevails.

The Company also received a major portion of its satellite imagery requirements for the Skaapkop kimberlite project in South Africa during the quarter.

Properties

Monroe's goal is profitable, long term production of gem quality diamonds. While the current focus is on Angola and South Africa, Monroe maintains a watching brief throughout the African Continent and internationally. Of particular note is the manner in which political and fiscal changes influence overall project economics. Monroe must be alert to these changes and management is presently conducting a portfolio review to ensure that

opportunities are being optimized and resources allocated where maximum value can be achieved. The current portfolio comprises both kimberlite and alluvial diamond projects.

The Qualified Person who has reviewed the information on Properties contained in this MD&A is Dr. Tania Marshall.

The Cangandala Concession – the Cangandala diamond project is located along the Cuanza River in the Malanje and Cuanza Sul provinces of central Angola. The project is a joint venture between Endiama (the Angolan state diamond company) 25%, Mineral Star (an Angolan private company) 25%, and Monroe (through its subsidiaries, Crystal Mining Corporation Ltd. (“Crystal”) and Blue Diamond International Holding Inc. (“Blue”), that hold the interests in the Cangandala Joint Venture) 50%. Monroe’s beneficial interest is 40%. Crystal is obliged to fund the initial exploration program on Cangandala and will have preferential return of investment in the event that the project is successful. The minimum expenditure for this initial program is US\$ 2 million. Blue is responsible for project development and technical direction.

The Cangandala project consists of two exploration targets, (a) kimberlite pipes and (b) alluvial gravels in and adjacent to the Cuanza River and its tributaries. The area of the concession covers some 3,000 sq km, including 120 km of the Cuanza River. To the west of the project, TransHex is currently assessing a number of kimberlites on its “Ganga” concession. To the south of the project, a number of local and South African companies operated commercial alluvial diamond ventures during the Angolan war years.

During the late 1960’s and 1970’s, both Diamang (a predecessor of De Beers and Endiama) and Condiama (a consortium managed by De Beers) investigated the diamond potential of this area. Throughout Angola, some two million samples were collected and several hundred kimberlite pipes were identified. During this program, the Cangandala Concession was sampled and kimberlitic indicator minerals recovered. After 1975, no formal exploration occurred in this area due to intense military activity during the civil war. However, successful barge mounted diving operations were conducted along the Cuanza River (directly adjacent to the south of the Cangandala concession) by at least one South African mining group (working for UNITA) which reported excellent results over the brief period during which it was active. After the cessation of hostilities in 2002, an unknown number of garimpeiros were operating on rapids along the Cuanza River, directly south of the Cangandala Concession.

A detailed, three phase prospecting program is planned to quantify the diamond potential of Cangandala. It is a typical requirement in Angola that a joint venture must complete a minimum exploration program on secondary deposits before pursuing primary deposits; hence the initial focus is on alluvial diamond potential. Phase I of the program comprises barge operations on the rivers, principally the Cuanza and the Luando, combined with reconnaissance pitting and trenching on the floodplain and areas where higher terraces are likely to occur. Phase II includes bulk sampling the alluvial deposits previously identified as well as tightening the mineral resource data. At this stage, a technical and financial feasibility study will be completed to allow commercial mining to commence. Phase III is an aggressive program targeted at identifying the location of kimberlite pipes through the completion of airborne geophysical and detailed soil sampling surveys. The exploration budget for the first phase approximates US\$3.0 million.

Satellite interpretation, together with reconnaissance site visits, indicates that there are numerous palaeo-meander scars on the Cuanza River floodplain. The primary target area for alluvial deposits within the concession is a meander complex that results from extensive westward migration of the Cuanza River, on the right-bank, downstream from its confluence with the Luando River. This complex is approximately 40 km x 10 km (potentially up to 50 km wide if all palaeo-activity is taken into account). The entire area of the confluence also forms part of this target area.

A preliminary structural interpretation of the satellite imagery indicates the presence of numerous lineaments that parallel and cross-cut various sections of the river. The transverse lineaments are the most important since these are expected to form irregularities in the channel of both the present and palaeo rivers. Such irregularities may be expressed as rapids, waterfalls or islands, which form ideal concentration sites for heavy minerals, including diamonds.

Although the Company’s exploration program has been approved and a support structure established in Luanda, progress has been severely hampered by administrative delays in Luanda. These include delays in finalizing the registration of the joint venture and in obtaining permits for the import of exploration equipment. A significant

step forward in this regard was made with the receipt of approval from Agencia Nacional de Investimento Privado (ANIP) on September 19, 2006, as discussed more fully above.

The London Project – the London Project covers 2,121 hectares (5,242 acres) and is situated 320 km southwest of Johannesburg. Monroe holds 100% interest subject to a 10% royalty and R10,000 per month rental. In January, Monroe announced that it had applied to the DME for a full commercial mining permit. The project is located along a palaeodrainage channel that runs generally north-south for some 45 km. Operations commenced at London in January, 2003 and Monroe has identified A0 and A1 gravels. During the prospecting program, the diamonds recovered realised an average of US\$ 400 per carat, with a record individual diamond price of US\$6,200 per carat for a 6.02 carat fancy orange diamond.

Monroe's application for a full commercial mining permit is progressing although recent experience suggests that it may be several more months before a decision is received.

A summary of the results of operations is set out in '*Results of Operations*'. More details on the London Project are available in the technical report prepared by ACA Howe International Limited and filed on SEDAR on January 23, 2003.

The Skaapkop Kimberlite Project – covers an area centred around the towns of Schweizer Reneke and Wolmaransstad in Northwest Province (formerly SW Transvaal). The area comprises hundreds of square kilometres. The objective of this regional project is to locate and develop the kimberlite sources of the Southwestern Transvaal alluvial diamond field. Up to 1984 (at which time the recording regime changed and subsequent production data is unavailable) the alluvial deposits in Northwest Province yielded approximately 14 million carats, worth in excess of US\$ 5 billion at current prices.

It is generally accepted that the diamonds from the Southwestern Transvaal alluvial field do not have agreed kimberlite sources. While small parcels have been recognised as being similar to diamonds recovered from the Premier and Boshof kimberlites, the vast majority of diamonds have been derived from as yet undiscovered sources. Interpretation of the sedimentary packages and the palaeodrainage systems that host the alluvial diamond deposits indicates that the diamonds could not have been sourced outside Northwest Province and, in fact, the sources likely lie within the confines of the presently known alluvial fields.

The mineral chemistry of the garnet population recovered from the same gravel deposits indicates that they are derived from kimberlites. Surface texture analysis further reveals that these garnets have not travelled substantial distances. Trace element geochemistry of ilmenites, combined with the garnet data as well as palaeodrainage interpretations indicate that the diamond deposits of the Northwest Province must have come from more than one discreet source.

The new mining regulations in South Africa make land administration both time-consuming and expensive in relation to regional exploration. These difficulties can be partly overcome by dividing the exploration program into phases, with permitting and licensing arising only in the final phase. The objective of the first phase of the program will be the identification of anomalies through synthesizing the substantial database available to Monroe. This will result in modelling involving palaeodrainage scenarios and the influence of kimberlitic indicator minerals. The extent of follow-up will be dependent on the success in the first phase of the program.

The second phase will entail, *inter alia*, airborne gravity surveys followed by detailed soil sampling. Provided positive results are achieved, this would be followed by percussion and core drilling of individual anomalies for petrography, mineral chemistry and micro-diamond assessment.

Projects outside South Africa

Southern Africa has long been considered highly prospective for kimberlites due to the presence of three large cratons. Although its share of world production has declined since the development of kimberlite mines in Siberia, Australia and Canada, the African continent remains the largest diamond producer, with climatic conditions favouring year-round exploration and a well-developed infrastructure reducing exploration and logistical costs. Monroe has set a priority on expanding and continues to research opportunities in Angola, Botswana, the Democratic Republic of Congo and South Africa.

Property Analysis

The following table presents the carrying value and expenditures on Monroe's mineral properties.

Property	September 30, 2006	Incurred during the period ended September 30, 2006, net of depletion and amortization	December 31, 2005
London	\$ 1,845,000	\$ 42,000	\$ 1,803,000
Allandale	0	(52,000)	52,000
Skaapkop	49,000	26,000	23,000
Middle Orange River	0	(189,000)	189,000
Angola	752,000	512,000	240,000
Plant and equipment	97,000	72,000	25,000
Total	\$ 2,743,000	\$ 411,000	\$ 2,332,000

Results of Operations

Operations

Monroe applied for a full mining licence for the London Project in November 2005 and, in accordance with regulations, suspended mining activities in January 2006 while the application is being considered. Activities at London during the third quarter focused on rehabilitation only. The Company has responded to all enquiries received to date from the DME in relation to the licence application. The application process can be lengthy and it is possible that Monroe will not receive a determination for several more months.

The Company continued to treat the London Project as a development stage project reported in the Consolidated Balance Sheet through the Mineral Interests account.

General and Administration Expenses (G&A)

G&A, after reduction of capitalized items, amounted to \$398,460 (2005 - \$494,015) for the nine months ended September 30, 2006. Prior to capitalization, gross G&A for the period ended September 30, 2006 was \$1,049,014 (2005 - \$615,832).

The gross costs (with comparative figures for 2005) are analysed as follows:

	Three months ended		Nine months ended	
	September 30, 2006	September 30, 2005	September 30, 2006	September 30, 2005
Salaries, benefits and stock options	\$ 152,553	\$ 96,150	\$ 502,242	\$ 272,117
Financial administration	25,400	21,350	89,100	63,367
Audit and legal	2,168	11,502	38,512	47,307
Investor relations, stock exchange	24,226	11,256	106,258	100,864
General office and miscellaneous	131,188	10,751	250,889	42,212
Travel and marketing	3,300	25,445	62,013	89,965
Total	\$ 338,835	\$ 176,454	\$ 1,049,014	\$ 615,832

Salary and general office costs capitalized to mineral interests amounted to \$420,595 and \$229,959 respectively for the period ended September 30, 2006, a total increase of approximately \$529,000 over 2005 due to the commencement of exploration activities in Angola. Stock option expense included in G&A amounted to \$33,730

(2005 - \$30,675). Financial administration costs increased as a result of the commencement of exploration activities in Angola. Investor relations comprises the investor relations contract as well as regulatory and filing fees.

Interest on Long Term Debt

Interest expense for 2006 remained stable compared with 2005. Interest bearing debt is denominated in sterling.

Summary of Quarterly Results

Quarterly results are unaudited.

(All figures are in \$ except share numbers)

	Three months ended							
	September 30, 2006	June 30, 2006	March 31, 2006	December 31, 2005	September 30, 2005	June 30, 2005	March 31, 2005	December 31, 2004
Diamond revenues, net of royalties	-	-	-	-	-	-	-	-
Direct mining costs	3,269	5,194	5,615	5,342	5,506	5,760	6,148	5,720
Depletion and amortization	1,874	1,340	2,760	1,569	1,979	2,066	1,016	910
Operating loss	5,143	6,534	8,375	6,911	7,485	7,826	7,164	6,630
Loss for the period	137,516	416,719	199,550	116,636	105,495	202,124	168,071	253,822
Working capital	211,997	621,892	41,067	465,398	(15,538)	171,126	293,131	439,951

Shareholders' equity	2,753,993	2,850,892	2,367,123	2,585,074	1,058,699	1,228,392	1,420,741	1,578,094
Shares outstanding	70,162,194	70,162,194	62,079,118	62,079,118	47,827,618	47,827,618	47,827,618	47,827,618
Net loss per share	0.00	0.01	0.00	0.01	0.00	0.01	0.00	0.02

1. No dividends have been paid since incorporation. Fully diluted per share amounts are not presented because the results are antidilutive.
2. The above information has been summarized from the consolidated financial statements of the Company prepared in accordance with accounting principles generally accepted in Canada.
3. Refer to 'Results of Operations' for a discussion of factors that have caused period to period variations, significant acquisitions, changes in direction of Monroe's business and other information relevant to an understanding of the Company's financial condition and results of operations.

Liquidity

Working Capital

At September 30, 2006, the Company had working capital of \$211,997 (December 31, 2005 - \$465,398), due mainly to the financing completed in April 2006. The Company does not generate positive cash flow from operations and is dependent on its current working capital, on loans from related parties, private placements and the exercise of stock options to supplement its limited financial resources.

Long Term Debt

Debt owing to an entity controlled by Monroe's controlling shareholder bears interest at 7% per annum and is denominated in sterling. At September 30, 2006, the principal outstanding amounted to £261,133 (December 31, 2005 - £261,133) and rolled-up interest to £42,292 (December 31, 2005 - £37,032). The debt is secured by a charge on the income from the London Project. The term of this financing facility has expired and repayment is under discussion. The holder has agreed not to demand repayment of £151,713 of the total balance before October 2007.

Unpaid salary due to the President of the Company amounts to \$330,000 (December 31, 2005 - \$430,000). The holder has agreed not to demand repayment of the balance before October 2007.

Stock Options

On September 1, 2006, the Company granted options to purchase 4,250,000 common shares at an exercise price of \$0.15 per share, expiring August 31, 2010. The options were granted to directors, consultants, and an employee of the Company.

Non-controlling Interest

The non-controlling interest in the Company's South African subsidiary, Monroe SA, results from the investment of Vuya! Investments (Pty) Limited ('Vuya!') in that company. This interest is recorded based on book values and does not reflect underlying fair value.

Environmental Liabilities

Monroe maintains its environmental rehabilitation liabilities on a current basis, thus obviating the need to accumulate a provision for this purpose. In addition, at the London Project in South Africa where it has been trial mining, Monroe meets the DME requirements for rehabilitation.

Capital Resources

No new share offerings were announced during the period.

Transactions with Related Parties

Except for the debt arrangements referred to in '*Liquidity*' there were no significant transactions with related parties.

Critical Accounting Estimates

The Company's accounting policies are discussed in Note 1 to the consolidated financial statements for the year ended December 31, 2005.

Changes in Accounting Policies Including Initial Adoption

No changes in accounting policy were implemented in 2005 or 2006.

Financial Instruments and Other Instruments

The Company is exposed to interest rate price risk to the extent that long term debt bears a fixed rate of interest. The Company is also exposed to currency exchange rate risks to the extent of its foreign operations conducted in Angola and South Africa, as well as the long term debt denominated in sterling. The Company does not hedge its exposure to fluctuations in the related foreign exchange rates.

Other Matters

Investor Relations

CHF Investor Relations of Toronto and Calgary is the Company's investor relations counsel. The investor relations program is aimed primarily at investor communications and interaction with the financial community in Canada. The monthly fee is \$5,000, plus expenses which arise, *inter alia*, in relation to briefings, presentations and the provision of publicity materials. In 2002, an option over 480,000 shares of the Company, exercisable at \$0.25 each and expiring in April 2007 was granted to CHF.

Business Risks

The exploration and development of diamond properties involves a wide range of risks which includes, but is not limited to, the uncertainty of discovery, lack of commercial deposits following discovery, title to properties, changes in government regulations, uninsured risks, product price fluctuations, environmental factors, political and economic risks, exchange rate fluctuations and exchange controls.

Monroe is at an early stage of its development. Its success will depend on the expertise of its management in pursuing business opportunities. The Company is in competition with companies possessing greater financial resources for both properties and personnel. The Company does not generate positive cash flow, has limited financial resources and must raise additional capital to implement its programs.

Readers are directed to the Company's web site (www.monroeminerals.com) for a fuller disclosure of business risks.

Additional Information

Additional information regarding the Company is available on SEDAR at www.sedar.com.
